|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              | Unward                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |           |                             |

MDCAT PREP BOOF

UNIT 08 **ELECTROMAGNETISM** 18. The force on a charge moving in a magnetic field is not independent of: (a) Area of conductor (b) The momentum of the particle (c) The intensity of the field (d) Both a and b 19. The value of permeability of free space is: (a)  $10^{-7}\pi mA^{-1}$ (b)  $4\pi \times 10^{-7} \text{T m} A^{-1}$ (c)  $2\pi \times 10^{-7} T mA^{-1}$ (d)  $4\pi \times 10^7 T mA^{-1}$ 20. Magnetic flux is maximum when angle is: (b) 90° (c) 120° (d) All of these 21. Strength of magnetic field is called (a) Strength Magnetic flux (d) Density density 22. Magnetic field lines created by current carrying wire is (a) Helical (b) Elliptical (c) Hyperbolic (d) · Circular 23. Magnetic flux is scalar product of (a)  $\vec{B}$  and  $\vec{V}$ (b) q and A (c) I and I (d) None of these 24. Magnetic field will not produce in case of (a) Charged positive particles (b) Charged negative particles (c) Neutral particles (d) All of these 25. Magnetic field along the axis of solenoid with n turns per unit length carrying current I is given (a)  $B = \mu_0 nI$  (b)  $B = \mu_0 N/L$ 26. Do magnetic flux lines intersect? (a) Yes (b) No (c) Depends on strength of field (d) Cannot be determined 27. Find the force due to a current element of length 2 cm and flux density of 12 tesla. The current through the element will be 5A. (a) 1N (b) 1.2N (c) 1.4N (d) 1.6 N 28. Magnetic flux is zero: (a) When angle is 90 (b) Angle is 0 (c) Angle is 180 (d) None of these 29. A square loop of side 2 m is place in a 5T of magnetic field. What will be the related flux? (a) 2.5 Weber (b) 5 Weber (c) 10 Weber (d) 20 Weber 30. Find the Lorentz force of a charge 2.5C having an electric field of 5 units and magnetic field of 7.25 units with a velocity 1.5m/s: (a) 39.68 (b) 68.93 31. Force acting on a negative charge is always (a) In the direction opposite to electric field (b) In the direction of electric field (c) In the direction perpendicular to electric field (d) In the direction perpendicular to the velocity of charge 32. Unit of relative permeability is (a) Henry (b) Henry/m (c) Dimensionless (d) Henry/sq.m 33. Work done by the magnetic force on charged particle in presence of perpendicular magnetic field (a) Positive (b) Zero (c) Negative (d) None of these

PRACTICE TEST NO.4

| 4. A charged particle is moving on circular path with velocity of the charged particle is doubled and strength of magnetic field is halved, then radius                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | PRACTICE TEST NO.4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

13. A negative charge moving with constant velocity v enters a region of uniform magnetic field pointing into the page. What is the direction of the magnetic force on the charge?

x x x x

(a) Left wards

(b) Right wards

(c) To the bottom of page (d) To the top of page

14. An electron is injected into a uniform magnetic field with components of velocity parallel to and normal to the field direction. The path of the electron is a:

(a) Helix

(b) Circle

(c) Parabola (d) Straight line

15. The unit of magnetic flux is

(a) Weber

(b) Wb m⁻³

(c) Henry (d) A m⁻¹

16. The magnetic field inside a solenoid is:

(a) Zero

(b) Non-uniform

(c) Infinite (d) Uniform

17. An electron enters the magnetic field from right towards left, B is into paper. The electron will be deflected:

(a) Upward

(b) Downward

(c) Toward (d) None of these

18. Magnetic flux, mathematically is defined as:

(a)  $\emptyset = \vec{B} \cdot \vec{A}$ 

(b)  $\emptyset = \vec{E} \cdot \vec{A}$ 

(c)  $\emptyset = \vec{B} \times \vec{A}$  (d)  $\emptyset = \vec{E} \times \vec{A}$ 

19. The e/m of an electron moving in a circular path in a magnetic field in terms of velocity v radius r and magnetic field B is given by:

Br

 $B^2r$ 

20. A vertical wire carries an electronic current into the page. What is the direction of magnetic field at point P located as shown?

(a) West (b) East

(c) North

21. A magnetic field:

(a) Always exerts a force on a charged particle

(b) Never exerts a force on a charged particle

(c) Exerts a force, if the charged particle is moving across the magnetic field lines

(d) Exerts a force, if the charged particle is moving along the magnetic field lines

is correct relation (T = testa and G = gauss):

(a)  $1T = 10^4$ G

(b)  $1T = 10^{-2}G$ 

(c)  $1T = 10^{-4}G$  (d)  $1T = 10^2G$ 

23. While finding the radius of circular path in the experiment to find e/m of electron, the glass tube is filled with:

(a) H₂

(b) He (c) O₂

(d) CO₂

ELECTROMAGNETISM 24. The magnetic field due to a current-carrying solenoid which has 'n' number of turns per unit

length is:

UNIT 08

(b)  $B = \mu_0 n^2 I$  (c)  $B = \frac{\mu_0 n I}{\ell}$ 

25. A very long solenoid has 400 turns per meter length of the solenoid. A current of 1.6A flows through it. Then the magnetic induction at the middle point of the solenoid on its axis, is approximately:

(a)  $16 \times 10^{-4} \text{ T}$ 

(a)  $B = \mu_0 nI$ 

(b)  $32 \times 10^{-4} \text{ T}$  (c)  $8 \times 10^{-4} \text{ T}$  (d)  $4 \times 10^{-4} \text{ T}$ 26. Two particles A and B of mass mA and mB respectively and having the same charges are moving in a plane. A uniform magnetic field exists perpendicular to this plane. The speed of the particles are vA and vB respectively and the trajectories are shown in the figure. Then:

(a)  $m_A v_A < m_R v_B$ 

(b)  $m_A v_A > m_B v_B$ 

(c)  $m_B > v_A$  and  $v_A = v_B$ 

(d)  $m_A = m_B$  and  $v_A = v_B$ 

27. A cable carries a current of 2 A vertically downward. The magnetic field produced by it at a point 10 cm north will be:

(a)  $2 \times 10^{-6}$  tesla west

(b)  $2 \times 10^{-6}$  tesla east

(c)  $4 \times 10^{-6}$  tesla west

(d)  $4 \times 10^{-6}$  tesla east

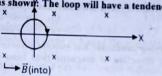

28. What is the magnetic force on a stationary charged particle in a uniform magnetic field?

(a) Zero (b) F=qvB (c)  $F=q(v\times B)$ (d) F=ILBsinθ

29. A current is flowing towards North along a power line. The direction of magnetic field above it, neglecting the earth's field, is:

(a) North

(b) South (c) East (d) West 30. A conducting loop carrying electronic current I is placed in a uniform magnetic field pointing into plane of the paper as shown. The loop will have a tendency to:

(a) Contract

(b) Expand

(c) Move towards x- (d) Move towards yaxis

31. Magnetic flux density is defined in terms of:

(a) Tesla

(b) Wbm⁻²

32. The imaginary closed path around a current conductor at which magnetic induction is to be  $N m^{-1} A^{-1}$ 

(a) Amperian path

(c) Gaussian surface

(b) Amperian surface

33. During the circular path in magnetic field, what is the magnetic force

27. c

(b)  $F = qB^2$ 

(d) F = qvB

34. The magnetic field is parallel to a surface, then the magnetic flux through the surface is: (b) Small but not zero (c) Infinite (d) Larger than 1

NMDCAT PREP BOO

35. 'F' is maximum force acting on a conductor. Now if we change the direction of conductor by making an angle of 45° with the magnetic field then the force becomes:

(a)

(c) 2F

- (d)  $\sqrt{2}$  F
- 36. If we doubled all the parameters of the force acting on current carrying conductor and  $\theta = 900$ then magnetic force becomes:
- (a) Double

(b) Four times

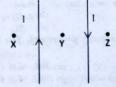

- (c) 8 times
- (d) 16 times
- 37. What happens to the magnet as the iron core is inserted into the solenoid? (a) It moves towards solenoid and rotates (b) It moves towards the solenoid

through 180°

(c) It moves away from solenoid

(d) It moves away from solenoid and rotates through 180°

38. Two long straight parallel wires held vertically have equal but opposite currents as shown in the

#### Which of the following effect will be observed?

- (a) Magnetic field at 'X' is stronger than that at 'Y' and 'Z'
- (b) Magnetic field at 'Y' is weaker than that at 'X' and 'Z'
- (c) Magnetic field at 'X', 'Y' and 'Z' is same
- (d) Magnetic field at 'X' is weaker than that at 'Y' but stronger than that at 'Z'
- 39. A solenoid is cut into two halves. Magnetic induction due to same current in each half will be:
  - (a) Half of the original

(b) Double of the original

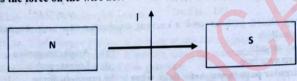

(c) Same as original

- (d) Four times of the original
- 40. A long straight current carrying conductor has current directed from bottom to top when held vertically. What will be the direction of magnetic field lines when observed from below the conductor?
  - (a) Clockwise

Anti clockwise

(c) Vertically upward

- (d) Vertically downward
- 41. The diagram shows a wire, carrying a current 'I', placed between the poles of magnet: In which direction does the force on the wire act?

- (a) Towards the 'N' pole of the magnet
- Downwards

(c) Upwards

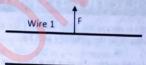

Towards the 'S' pole of the magnet

MDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

- 42. If the number of turns of a solenoid circular coil is doubled, but the current in the coil and radius of the coil remains same, then what will be the magnetic flux density produced by the coil?
  - (a) Magnetic flux density will be halved.
  - (b) Magnetic flux density increases by different amount at different points
  - (c) Magnetic flux density remains unchanged
  - (d) Magnetic flux density will be doubled
- 43. Two long parallel wires Wire 1 and Wire 2 repel each other as shown in the figure. What could

Wire 2

- Both carry current in same direction
- (b) Both carry current in opposite direction
- Wire 1 has current, but Wire 2 has no (d) Wire 2 has current, Wire 1 has no current
- 44. A 10 cm long solenoid has 100 turns. What will be the magnetic field inside it along its axis if one micro ampere current is passed through it?
  - (a)  $4\pi \times 10^{-13}$  telsa (b)  $4\pi \times 10^{-7}$  telsa

- (c)  $4\pi \times 10^{-10}$  telsa (d)  $4\pi \times 10^{-16}$  telsa 45. Two  $\alpha$ -particles have the ratio of their velocities as 3 : 2 on entering the magnetic field. If they move in different circular paths, then the ratio of the radii of their paths is
  - (a) 2:3

UNIT 08

- (b) 3:2
- (c) 4:9
- 46. A solenoid 15.0 cm long has 300 turns of wire, a current 5 A flows through it. The magnitude of magnetic field inside the solenoid is:
  - (a)  $1.256 \times 10^{-7} Wbm^{-2}$ (c)  $1.256 \times 10^{-2} Wbm^{-2}$

- (b)  $1.256 \times 10^{-5} Wbm^{-2}$
- (d)  $1.256 \times 10^{-7} Wbm^{-2}$ 47. A long solenoid has magnetic field strength of  $3.14 \times 10^{-2} T$  inside it when a current of 5 Apasses through it. The number of turns in 1 m of the solenoid is:
  - (a) 1000
- (b) 5000
- (d) 10000
- 48. Force on current carrying conductor per unit length is given by: (a) IL  $\sin \theta$  (b) ILB
- (c) IL
- (d) IB  $\sin \theta$
- 49. If a charge q is moving in a velocity selector. The charge will move in a straight path if:
- (b) E is perpendicular to B. (c)
  - $F_m = F_e$
- (d) All of these
- 50. A charge particle is moving in a circular path in a perpendicular magnetic field. By increasing the magnetic field charge to mass ratio of the particle will:
  - (a) Increase
- (b) Decrease
- (c) Remain same
- (d) None

| Sr.         | 42.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 43 | 44                  | No. |     |     | 1. 1. d. 184 | THE ALLE |     |

# **ELECTROMAGNETIC INDUCTION**

### PRACTICE TEST NO. 1

| 1. | In a transformer 220 | ac voltage is increased<br>imber of turns in the pr | 2200 volts. If the nun<br>imary will be: | nber of turns in the secondary                    |
|----|----------------------|-----------------------------------------------------|------------------------------------------|---------------------------------------------------|
|    | (-) 200              | (b) 100                                             | (c) 50                                   | (d) 20 agnetic field of intensity 10 ³ |

Wbm-2. The magnetic flux through the coil is:

(a) 10 weber

(b) 10⁻⁵ weber

(c) 105 weber

(d) 100 weber

3. A coil having an area 2m2 is placed in a magnetic field which changes from 1 Wbm2 to 4 Wbm2 in a interval of 2 s. The emf induced in the coil will be:

(b) 3V

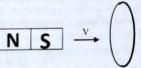

4. To induce an emf in a coil, the linking magnetic flux:

(c) 1.5 V

(a) Must decrease (c) Remain constant (b) Can either increase or decrease (d) Increase

5. In the diagram shown if a bar magnet is moved along the common axis of two single turn coil A and B in the direction of arrow then:

Current is induced only in A and in B

(b) Induced currents in A & B are in same direction

(c) Current is induced only in A and not in B

Induced currents in A & B are in opposite directions

6. An aeroplane in which the distance between the tips of wings is 50 m is flying horizontally with a speed of 360 kmh⁻¹ over a place where the vertical components of earth magnetic field is 2 x 10⁻⁴ Wbm⁻². The potential difference between the tips of wings would be:

(a) 0.1 V

(b) 1.0 V

(c) 0.2 V

(d) 0.01 V

7. A coil of N turns and mean cross-sectional area A is rotating with uniform angular velocity  $\omega$ about an axis at right angle to uniform magnetic field B. Then the emf developed between the centre and the rim of the plate is:

(a) NBA sin ωt

(b) NB ωsin ωt

(c)  $\frac{\pi b}{4} \sin \omega t$ 

(d) NBA ω sin ωt

8. The core of a transformer is assembled with laminated plates to reduce energy losses due to:

(a) Eddy current

(b) Hystersis

Resistance in winding

(d) None of these

9. What is increased in step-down transformer?

(a) Voltage

(b) Current

(c) Power

(d) Current density

|-------|------|--------|-------|------|

10. The ratio of secondary to the primary turns in a transformer is 3:2. If the power output be P, then the input power neglecting all losses will be equal to:

(a) 5P

UNIT 09

(b) 1.5 P

(d) 16 amp

11. A 100% efficient transformer has 100 turns in the primary and 25 turns in its secondary coil. If the current in the secondary coil is 4 amp, then the current in the primary coil is: (b) 4 amp

(a) 1 amp

12. A transformer is used to:

(a) Change the alternating potential

(c) Prevent the power loss in alternating current flow

(b) Change the alternating current

(d) All of these

(c) 8 amp

13. The induced emf in a coil having 'N' number of loops is equal to N tims the negative of the rate of change of magnetic flux linked with coil, is a statement of:

(a) Lenz's law

(b) Ohm's law

(c) Faraday's law

(d) Coulomb's law

14. Maximum motional emf in a conductor is given as:

(a)  $\varepsilon = -vBL\sin\theta$ 

(b)  $\varepsilon = -v^2 B L$ 

(c)  $\varepsilon = -vBL\cos\theta$ 

(d)  $\varepsilon = -vBL$ 

15. Carbon brushes in A.C generator are:

(a) Moving

(b) Stationary

Sometimes moving & sometimes stationary

(d) Moving with increasing speed

16. In A.C generator if plane of coil is parallel to magnetic field, the emf induced is:

(a)  $\varepsilon = N\omega A$ 

(b)  $\varepsilon = Zero$ 

(c)  $\varepsilon = N\omega AB$ 

(d)  $\varepsilon = NfAB \sin \theta$ 

17. The angular frequency of armature coil is if A.C generator produces current of 50 Hz frequency:

(a)  $50 \pi$ 

(b)  $200 \pi$ 

(c) 100 m

(d) 25 m

18. A wire loop is rotated in a uniform magnetic field about an axis perpendicular to the field. The direction of the current induced in the loop reverses once each:

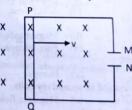

(a) Ouarter revolution

(c) Half revolution

(b) Full revolution

(d) Two revolution

19. A rod PQ is connected to the capacitor plates. The rod is placed in a magnetic field (B). If the rod is pulled out of magnetic field with velocity  $\vec{v}$  as shown:

(a) Plate M will be negatively charged (c) Plate N will be negatively charged

(b) Both plates will be similarly charged

(d) No charge will be collected on plates 20. A rectangular coil of 100 turns and size  $0.1 m \times 0.05 m$  is placed perpendicular to a magnetic field of 0.1 T. The induced emf when the field drops to 0.05 T in 0.05 s is:

(a) 0.5 V

(b) 0.25 V

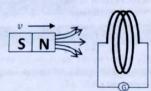

(c) 1.0 V

(d) 2.0 V

Sr. 14. 17. 19. 20. Ans: d

MDCAT PREP BOOK

- (a) The flux linked is more
- (c) The rate of change of flux is increases
- (b) There is no change in the flux
- (d) None of these
- 22. A magnet is placed along the axis of circular coil. The magnet is moved towards the coil. The induced current in coil (as viewed from left side of circular coil is) is:

- (a) Zero
- (c) Anticlockwise

- (b) Clockwise
- (d) Can't be predicted
- 23. The mechanical energy spent by the external agency on a metallic rod connected with galvanometer and moving perpendicular to a magnetic field is converted into electrical energy, To increase electrical energy, mechanical energy has to be increased. This relates to:
  - (a) Ohm's law

(b) Coulomb's law

(c) Lenz's law

- (d) Newton's law of motion
- 24. A device which converts mechanical energy into electrical energy is called:
  - (a) Current generator (c) Transformer

- (b) The same and to the right
- (d) Inverter
- 25. By which of the following way an emf can be induced in a circuit that represent in an external magnetic field?
  - (a) By changing the area of circuit coil
- (b) By changing the magnetic field strength
- (c) By motion of the circuit coil
- (d) All of these
- 26. A conducting rod of length 0.5 m moves parallel to a magnetic field of magnitude 2 T with velocity 5 ms-1, the emf induced in the moving rod is:

  - (a) 5 V (b) 10 V
    - (c) 20 V (d) 0 V

(c) Magnet

(d) Load

- 27. In A.C generator are responsible to provide induced current from armature to external circuit: (b) Split rings
- (a) Carbon brushes
- 28. The Len'z law refers to:
  - (a) Induced current
  - (c) Motional emf

- Induced potential
- (d) All of these
- 29. Magnetic induction is also called
  - (a) Flux

- (b) Magnetization (d) Flux intensity
- (c) Magnetic intensity 30. The role of inductance is equivalent to
- (c) Energy
- (d) Momentum

- (a) Inertia (b) Force
- 31. In step down transformer
- is decreased in secondary coils.

- (a) Electric field (b) Number of turns

- (c) Magnetic field
- (d) None of these

- 32. Motional emf induced in a coil is independent of
  - (a) Number of turns

(b) Change in flux

(c) Change in time

- (d) Resistance
- 33. For a metal rod of length L and moving with speed v in perpendicular to magnetic field then motional emf at its end is
  - (a) vBL
- (b)  $vLB^2$
- (c)  $v^2BL$
- (d) None of these

**ELECTROMAGNETIC INDUCTION** 

- 34. One of the major reasons for power loss in transformer is
  - (a) Radiation loss

UNIT 09

(b) Convection loss

(c) Eddy current loss

- (d) All of these
- 35. Whenever the magnetic flux linked with an electric circuit changes, an emf is induced in the circuit. This is called
  - (a) Electromagnetic induction
- (b) Kirchoff's law

(c) Hysteresis loss

- (d) Lenz's law
- 36. Time varying magnetic field creates electric field, this is called
  - (a) Electric induction

- (b) Magnetic induction (d) Dipole induction
- (c) Electromagnetic induction 37. The direction of induced current is always so as to oppose the change which causes the current is

- (a) Faraday's law 38. Transformer operates on:
  - (b) Lenz's law
- (c) Ohm's law
  - (d) Kirchoff's law
- (a) A.C (b) D.C 39. Current carrying loop behave like a magnetic:
  - (a) Monopole
    - (b) Dipole

(c) Both

- (d) None of these (d) Octopole
- (c) Quadrupole 40. Faraday law states that the rate of change of magnetic flux is equal to:
  - (a) Electromotive force

(b) Induced current

(c) Induced flux

- (d) Induced magnetic field
- 41. Power transformers are designed to have maximum efficiency at:
  - (a) Full load (b) 50 % (c) 80%
- 42. Which of the following is expression of induced current in A.C generator?

- (a)  $I = \frac{\varepsilon_o}{R} \sin(\omega t)$  (b)  $I = \frac{\varepsilon_o}{R} \cos(\omega t)$  (c)  $I = \frac{\varepsilon_o}{R} \tan(\omega t)$  (d)  $I = \frac{\varepsilon_o}{R} \sec(\omega t)$ 43. "The direction of the induced current is always so as to oppose the change which causes" is a
  - (a) Faraday's law (b) Lenz's law
- (c) Ampere's law 44. A straight conductor of length 4 m moves at a speed of 5 m s⁻¹ when the conductor moves at an
- angle of 60° with the direction of magnetic field of induction 0.5 T, the emf induced is: (b) 8.66 V 45. In A.C generator, if coil rotates with frequency of 50 Hz, how many times the current will reverse
  - (a) 100
    - (b) 50
- 46. The working principle of an A.C. Generator is:

(a) NωAbcos(ωt)

- (a) Self induction
- (c) Mutual induction 47. Emf produced in generator is:

(b) Ohm's law

(c) 6.75 V

- (d) Faraday's law
- (c) NωABcot(ωt) (d) NωABsin(ωt)

(c) 200 (d) 25

- (b) NωAbtan(ωt) 48. Lenz's law provides information about direction of:
  - (a) Inductance (c) Induced flux

(b) Induced current

- 49. SI unit of inductance is
  - (a) Henry (b) Farad

- (c) Not generates
- 50. When north pole of bar magnet move towards a conducting loop, induced current flows in
  - (b) Anticlockwise direction (d) Not enough information

(d) Induced magnetic field

NMDCAT PREP BOOK

# PRACTICE TEST NO. 2

| . SI unit of magnetic in | ıdu | uction | 1 15 |
|--------------------------|-----|--------|------|
|--------------------------|-----|--------|------|

(a) Weber 2. The insulation between sheets of transformer core is to get small:

(b) Gauss

(c) Tesla

(d) Maxwell

(b) Eddy current (a) Hysteresis loop

(c) Both

(d) None of these

3. Power transformer have maximum efficiency at

(a) No load

(b) Full load

(c) Half load

(d) Double load

4. Calculate the maximum motional emf when the velocity is 10m/s, the length is 3m and the magnetic field density is 5T

(a) 150V

(c) 100V

(d) 0V

5. A real transformer does not change:

(a) Voltage level

Power level Frequency level

(c) Current level 6. Principle of transformer is

(a) Mutual induction

Self induction

(c) Motional emf

(d) All of these

7. Motional emf induced in a coil is dependent on

(a) Magnetic field

(c) Length (b) Orientation

(d) All of these

8. A ring is allowed to fall above a magnet as shown in the following figure:

(a) Clock-wise, south

(b) Clock-wise, north

(d) Anticlockwise, south

(c) Anti-clockwise, north 9. In the diagram shown a bar magnet is moved along the common axis of two single turn coils A and B in the direction of arrow. Then:

Current is induced only in A and not in B

(b) Induced currents in A & B are in the same direction

Current is induced only in B and not in A

(d) Induced current in A and B are in opposite directions

10. The magnitude of induced emf is proportional to:

(a) Increase in flux

(b) Decrease in flux (d) Change in flux

(c) Rate of change of flux 11. Faraday's law explains how electric field will interact with

(a) Electric field

(b) Magnetic field (c) Battery

(d) None of these

Electromagnetic force is proportional to rate of change of field

(c) Induced current opposes the cause which induces it

Both A and B

UNIT 09

20. In A.C generator if vector area of coil is parallel to magnetic field, the emf induced is:

(a) Half of maximum

(b) Zero

(c) Maximum 21. Slip rings in A.C generator are connected with:

(d) One fourth of maximum

(a) Ends of armature coil (c) External load resistance

(b) Field magnet (d) Commutator

22. A device which converts mechanical energy into electrical energy called: (a) Current generator

(b) Electric motor

(c) Thermistor

(d) Transformer

23. In a primary coil 5 A current is flowing on 220 volts. In the secondary coil 2200 V voltage produces. Then ratio of number of turns in secondary coil and primary coil will be:

(b) 10:1

(c) 1:1

(d) 11:1

# PRACTICE TEST NO. 3

1. It is desired to make an A.C generator that can produce an emf of maximum value 5 kV with 50 Hz frequency. A coil of area 1 m2 having 200 turns is used as armature. What is the magnitude of magnetic field in which the coil rotates?

(a) 0.04 T

(c) 0.08 T

(d) 0.50 T

2. In Faraday's law  $\varepsilon = -N \frac{\Delta \theta}{\Delta t}$ , then negative sign indicates that:

(a) Direction of induced emf is such that it opposes the change in flux

(b) Direction of induced emf is such that it favors the change in flux

(c) Emf induced is decreasing

(d) All of these

3. If frequency of rotation of A.C generator is 60 Hz, how many times alternating current will reach to maximum value in one second?

(a) 60

(c) 240

4. When a magnet was pushed towards a solenoid, the meter connected to the solenoid showed a deflection to the right, when the same magnet was pulled away from the solenoid at the same speed, what was the deflection on the meter?

(a) Greater and to the right

(b) The same and to the right

(d) Zero

(c) The same but to the left 5. The rod of unit length is moving at 30° through a magnetic field of 1 T. If velocity of rod is 1 m/s, then induced emf in the rod will be given by:

(b) 0.5 V

(c) 0.25 V

6. A magnetic field of induction 10 T acts at right angle to a coil of area 100 cm2 with 200 turns and having a resistance of  $10\Omega$ . The coil is removed at a uniform rate from the field in 0.5 sec. the induced current is

(a) 0.4 A

7. A copper ring is suspended by a thread in a vertical plan. The north pole of a magnet is brought near the ring in horizontal direction as shown. What will be of effect on the ring?

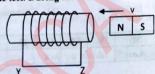

(a) Ring will be attracted towards the magnet

Ring will be repelled away

(c) Ring will make simple harmonic motion

(d) No change in the position of ring

8. In the following diagram, X is a coil with a hallow core. The magnet is pushed at constant speed of from the right end into core and out again at the left. During the motion:

(a) Current in wire YZ will be from Y to Z

Current in wire YZ will be from Z to Y

Current in wire YZ will be from Z to Y and then from Y to Z

(d) Current in wire YZ will be from Y to Z and then from Z to Y

|                  | ELECTROMAGNETIC I |

9. A straight wire of length 0.20 m moves at a steady speed of 3.0 m s⁻¹ at right angle to the magnetic field of flux density 0.10 T, the emf induced across the ends of wire as:

(b) 0.06 V

(c) 0.05 V

10. A coil having number of turns N and cross-sectional area A is rotated in a uniform magnetic field R with an angular velocity ω. The maximum value of the emf induced in it is:

(b) NBAω

11 The induced current in A.C generator of frequency 50 Hz reaches to zero value per second.

12. The general expressions of induced emf by A.C generator is given as:

(a)  $\varepsilon = N\omega AB \sin \theta$ (c)  $\varepsilon = N\omega AB\cos\theta$ 

(b)  $\varepsilon = N\omega AB \tan \theta$ 

(d)  $\varepsilon = N\omega AB \sec \theta$ 

13. In A.C generator, which of the following is not used?

(a) Armature

(b) Field magnet

(c) Stator

14. While discussing motional emf in a conductor moving in uniform magnetic field, the electric and magnetic force on charge particle in that conductor are at: (a) 0°

(b) 180°

15. Mathematical form of Faraday's law is:

(a)  $\varepsilon = -N \frac{\Delta B}{\Delta t}$ 

(b)  $\varepsilon = -N \frac{\Delta \phi}{\Delta \epsilon}$ 

16. In a transformer the primary has 500 turns and secondary has 50 turns. 100 volts are applied to the primary coil, the voltage developed in the secondary will be:

(a) IV

(b) 10 V

(d) 10000 V

17. A transformer is employed to reduce 220 V to 11 V. The primary draws a current of 5 A and the secondary 90 A. The efficiency of the transformer is:

(a) 20%

(b) 40%

(d) 90%

18. The transformer ratio in the step-up transformer is:

(b) Greater than 1

(c) Less than 1

Depends upon output power

19. If rotational velocity of a dynamo armature is doubled, then induced emf will become:

(a) Half

(b) Two times

(c) Four times

(d) Unchanged

20. Which of the following is constructed on the principle of electromagnetic induction?

(a) Galvanometer

(b) Electric motor

(c) Generator (d) Voltmeter

21. A conducting rod of length ℓ is falling with a velocity v perpendicular to a uniform horizontal magnetic field B. The potential difference between the two ends will be:

(a) 2Bev

(b) Bℓv

(c) -Bev

(d) B2 2 v

22. A 10 meter wire falling with velocity 5 ms⁻¹ if length is perpendicular to the field  $0.3 \times 10^4$  Wbm 2. The induced emf across the terminal will be:

(a) 0.15 V

(a) Wbm⁻²

(b) 1.5 V

(c) 1.5 mV

(d) 15.0 V

23. If a coil of metal wire is kept stationary in a non-uniform magnetic field then:

(a) An emf is induced in the coil (c) Neither emf nor current is induced 24. The unit of magnetic flux is:

(b) A current is induced in the coil (d) Both emf and current is induced

(b) Wb (c) Henry 25. A coil having 500 square loops each of side 10cm is placed normal to a magnetic flux which increase at the rate of 1 Ts 1. The induced

UNIT 09

# PRACTICE TEST NO. 4

|    | the current                               | induced emf in a coil is independe | ent of | :\ |
|----|-------------------------------------------|------------------------------------|--------|----|
| 1. | In electromagnetic induction, the current | Resistance of                      | (d)    | 1  |

- (a) Change in flux (b) Time
- - circuit
- above
- 2. When the north pole of a magnet is brought near the coil, viewing above the induced current in the ring will be:

- (a) First clockwise then anticlockwise
- (b) In clockwise direction
- (c) In anticlockwise direction
- (d) First anticlockwise then clockwise
- 3. The direction of induced emf during electromagnetic induction is given by:
  - (a) Faraday's law
- (b) Lenz's law (c) Maxwell's law

- 4. According to Faraday's law of electromagnetic induction:
  - (a) The direction of induced current is such that it opposes the cause producing it
  - The magnitude of induced emf produced in a coil is directly proportional to the rate of change
  - of magnetic flux
  - (c) Induced current always decrease the Φ
  - (d) Induced current always increase Φ
- 5. The north pole of a magnet is brought near a magnet ring. Viewing from magnetic side the direction of the induced current in the ring will be:
  - (a) Clockwise
- (b) Anticlockwise
- (c) Towards north (d) Towards south
- 6. Magnetic flux in a circuit containing a coil of resistance  $2\Omega$  changes from 2 Wb to 10Wb in 0.2 sec. The charge passed through the coil in this time is:
- (b) 1.0 C
- (c) 5.0 C
- 7. A coil of area 80 cm2 and 50 turns is rotating with 2000 revolutions per minute about an axis perpendicular to a magnetic field of 0.05 Tesla. The maximum value of emf developed in it is:
  - (a) 200 π volt
- (b)  $\frac{10\pi}{3}$  volt
- (c)  $\frac{4\pi}{3}$  volt
- 8. A circular metal plate of radius R is rotating with a uniform angular velocity ω with its plane perpendicular to a uniform magnetic field B. Then the emf developed between the center and the rim of the plate is:
  - (a)  $\pi \omega BR^2$

- 9. Eddy current are produced when:

  - (a) A metal is kept in varying magnetic field (b) A metal is kept in the steady magnetic

  - (c) A circular coil is placed in a magnetic field (d) Through a circular coil, current is passed

| UNIT 09 | ELECTROMAGNETIC INDUCTION |
|---------|---------------------------|
|         |                           |

- 10. In transformer, core is made of soft iron to reduce?
  - (a) Hysteresis losses
- (b) Eddy current losses
  - (c) Force opposing electric current
- (d) None
- 11. The primary winding of a transformer has 100 turns and its secondary winding has 200 turns. The primary is connected to an AC supply of 120 volts and the current flowing in it is 10 A. The voltage and the current in the secondary are:
  - (a) 240 V, 5A
- (b) 240 V. 10A
- (c) 60V, 20 A (d) 120 V, 20A
- 12. A transformer connected to 220 volt lines shows an output of 2A at 11000 volt. The efficiency is 100%. The current drawn from the line is:
- (b) 200 A
- (c) 22 A (d) 11 A
- 13. A step up transformer has transformation ratio 5:3. What is voltage in secondary if voltage in primary is 60 V.
  - (a) 20 V
- (c) 100 V
- 14. "The direction of induced current is always so as to oppose the cause of that procures it", is a statement of:
  - (a) Lenz's law
- (b) Boyle's law
- (c) Faraday's law
- (d) Ohm's law

- 15. The coil of A.C generator is also known as:
  - (a) Commutator
    - (b) Field magnet
- (c) Stator
- (d) Armature
- 16. In armature coil of A.C generator, the emf induced in two sides is taken as zero because force experienced by charges in these sides is:
  - (a) Along the sides of the wires
- (b) Always zero
- (c) Perpendicular & not along sides of the wires (d) All of these
- 17. The current induced by A.C generator depends upon: (a) Area of armature coil
  - (b) Angular frequency of armature coil
  - (c) Number of turns of armature coil
    - (d) All of these
- 18. A cylindrical bar magnet is kept along the axis of a circular coil. If the magnet is rotated about its
  - (a) A current will be induced in the coil
  - No current will be induced in the coil
  - Only an emf will be induced in the coil
  - (d) Both a current and an emf will be induced in the coil
- 19. Lenz law is in accordance with:
  - (a) Law of conservation of momentum
  - (b) Law of conservation of angular momentum
  - (c) Law of conservation of K.E.
  - (d) Law of conservation of energy
- 20. A circular coil has area A and is placed in a uniform magnetic field such that its plane is perpendicular to the lines of force of the magnetic field. If the magnetic field has magnitude B and the plane of the coil is turned through 180° about an axis perpendicular to the magnetic field in a time t, what is the magnitude of the induced e.m.f?
  - (a) Zero

- 21. In electromagnetic induction, the induced emf is independent of: (a) Change in flux
  - (c) Time

- (b) Resistance of circuit
- (d) Number of turns 22. A generator produces a voltage that is given by  $V = 220 \sin 314 t$  volt, where time "t" is in second. The frequency of this voltage is:
  - (a) 55 Hz
- (b) 19 Hz
- (c) 60 Hz
- (d) 50 Hz

(a) Eddy currents & Hysteresis loss (c) Flux leakage & Resistance of coils (b) Magnetic loss & Iron loss (d) All of these

57. The percentage efficiency of a transformer can be calculated by:

(a)  $\eta = \frac{P_{out}}{R} \times 100\%$ 

# 58. The power loss due to flux leakage in a transformer can be reduced be:

(a) Using thick wire for winding of the coil

(b) Using laminated iron sheets stacked together as core

(c) Winding the two coils one over another

(d) Using step-up transformer

## 59. In a step-up transformer:

(a) Secondary voltage is greater than primary voltage

(b) Secondary power is greater than primary power

(c) Primary turns are greater than secondary turns

(d) Primary current is lesser than secondary current

60. A transformer steps up 220 volt to 2200 volt. If the secondary coil of a transformer has 100 turns, the number of turns in the primary coil is:

(c) 20

(b) 100 (a) 10 61. If a step up transformer were 100% efficient, the primary and secondary winding would have the

(a) Current

(b) Number of turns (c) Power

62. Step-up transformer has a transformation ratio of 2:3. What is the voltage in secondary, if voltage in primary is 40 V?

(a) 60 V

(b) 90 V

(c) 15 V

(d) 120 V

63. The core of any transformer is laminated so as to:

(a) Reduce the energy due to eddy currents

(b) Make it robust and strong

(c) Make it light weight

(d) Increase the secondary voltage

64. In a transformer, number of turns in primary coil are 140 and that of the secondary coil are 280. If current in primary coil is 8 A, then that of the secondary coil is: (d) 10 A

(b) 6 A

65. A step-up transformer has turn ratio of 25. If the output current is 10 A, the input current is: (c) 35 A (b) 2.5 A 66. The efficiency of a transformer which take input power of 200 W is 80%, the power supplied by

this transformer on load side is:

(b) 140 W

(c) 200 W

67. Step-up transformer has turn ratio of 6:2. What is the voltage in the secondary, if the voltage in primary is 40 V:

(b) 120 V

(c) 60 V

68. In a step-up transformer, the turns ratio is 1:4. A 1.5V battery is connected across the primary. The voltage across the secondary is:

(b) Zero

(c) 0.75 V

69. A step-up transformer operates on a 200 volt line and supplies a current of 2 ampere. The ratio of primary and secondary winding is 1:5. The output voltage in the secondary is:

(a) 200 V

(b) 40 V

(c) 1000 V

(d) 1100 V

## PRACTICE TEST NO. 1

1. Peak voltage in the output of full wave rectifier is 10V so DC component of output voltage is

(a)  $10\sqrt{2}$ 

(b)  $20/\sqrt{2}$ 

(c)  $20/\pi$ 

2. Rectifier is a device which converts

(a) AC to DC

(c) AC to triangular current

(b) DC to AC (d) DC to triangular current

3. If a half wave rectifier is used to convert 50Hz. AC into DC, then the number of pulses present in rectifier voltage is

(a) 25

(b) 50

(c) 100

(d) 75

4. A full wave rectifier is operating from 50 Hz mains. Fundamental frequency of ripple will be:

(a) 100 Hz

(b) 25 Hz

(c) 50 Hz

(d) 200 Hz

5. In which rectifier ripple factor is less (a) Full wave

(b) Half wave

(c) Both A and B

(d) None of them

6. In full wave bridge rectification number of diodes required are equal to: (b) 5

(c) 4 7. For a half waver rectifier, the input and output waveforms are shown as:

The time period of the output will be (a) 5 ms (b) 15 ms (c) 10 ms (d) 20 ms

8. A full wave rectifier is being used to rectify an A.C voltage of 110 V, 60 Hz. The number of pulses

of rectified current obtained in five seconds is:

(b) 60 9. In a full-wave center tap transformer rectifier, how many diodes conduct at a time?

(b) 2

(c) 3 (d) 4 10. A half wave rectifier is being used to rectify an A.C voltage of frequency 60 Hz. The number of

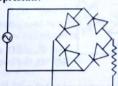

pulses of rectified current obtained in two seconds is:

(b) 240

(c) 120

(d) 30

11. The following circuit represents:

(a) Half wave rectifier

(b) Full waver rectifier

(c) Quarter waver rectifier

(d) None of these

12. The time period of an A.C cycle is 10 s such that it is allowed to go through a bridge rectifier then the frequency of output ripple will be:

(a) 0.5 Hz

(b) 0.2 Hz

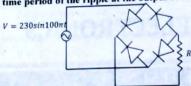

(c) 0.1 Hz

(d) 0.4 Hz

13. The minimum number of diodes required for half wave rectification are:

| (a) 4 |    |    |    | (b) 1 |    |    | (c) 2 |    |    |     | (d) 3 |     |     |  |

MDCAT PREP BOOK

(a) 100 ms

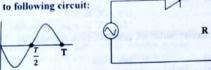

(b) 20 ms

(c) 50 ms

(d) 10 ms

15. The width of depletion region during forward biased mode of a PN-junction diode: (c) Remains same (d) None of these

(b) Increases (a) Decreases 16. If is given to following circuit:

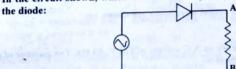

The output voltage during  $0 \rightarrow \frac{T}{2}$  will be:

(a) Positive half

(b) Negative half

(d) A.C

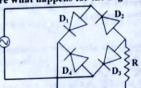

(c) Zero 17. In the circuit shown, which terminal of output becomes negative during the conduction mode of

(a) A

(b) (d) Can not be predicted

(c) Either A or B 18. In the following figure what happens for the negative half cycle of the input?

(a) D₁ and D₃ conduct

D₄ and D₂ conduct

D₁ and D₂ conduct

(d) D4 and D3 conduct

19. Disadvantage of half wave rectification as compared to full wave rectification is:

(a) Signal is not converted to DC

(b) Power of half signal wasted (about 50%)

Pulsating DC is produced

(d) Signal at output becomes triangular AC

**ELECTRONICS** 

20. In figure, the current supplied by the battery is:

(a) 0.1 A

UNIT 10

(c) 0.3 A

21. The basic reason why a full wave rectifier has twice efficiency then half wave rectifier because:

(a) It uses transformer

(b) Its ripple factor is much less

(c) It uses both cycle as input

(d) Output frequency is double the line frequency

22. Which of the following diode is not in reverse biased mode?

23. In the diagram, the input is across the terminals A and C and the output is across the terminals B and D, then the output is:

(a) Zero

(b) Same as input

Half wave

24. If a full wave rectifier circuit is operating from 50 Hz mains, then the time period of output ripples will be:

(a) 10 ms

(b) 40 ms

(c) 50 ms

(d) 80 ms

25. The output voltage of a rectifier is:

(a) Straight line

(b) Smooth

(c) Pulsating

(d) None of these

26. A half wave rectifier is being used to rectify an alternating voltage of 50 Hz. The no. of pulses of rectified current obtained in one second is:

(c) 100

27. In half wave rectification, diode conducts for:

(a) Positive half cycle of A.C.

(b) Negative half cycle of AC

(c) Complete cycle of AC

(d) Either +ve or -ve half cycle of A.C

28. The process in which A.C is converted to D.C is called....., and the process in which D.C is converted to A.C is called:

(a) Rectification, rectification (c) Conversion, rectification

(b) Rectification, inversion

(d) Inversion, inversion

| State Concession | The same of the same of | 100 |     |     |     |     |     |     |     |
|------------------|-------------------------|-----|-----|-----|-----|-----|-----|-----|-----|

| Ans:             | a                       | c   | d   | c   | a   | c   | b   | d   | b   |

## 29. Which one of the following statements is not correct?

- Diode does not obey ohm's law
- PN junction diode symbol shows an arrow identifying the direction of current flow
- (c) Ideal diode is an open switch
- (d) Diode is an ideal one way conductor

#### 30. In comparison of a half wave rectifier, the full wave rectifier gives higher: Average output voltage (d) All of these

- (a) Efficiency (b) Average dc 31. The reverse biasing in a PN-junction diode:
  - (a) Decrease the potential barrier
- (b) Increase the potential barrier
- (c) Increase the number of minority charge
- (d) Increase the number of majority charge

## 32. The cause of the potential barrier in a PN-junction diode is:

- (a) Depletion of positive charges near the junction
- (b) Concentration of positive charges near the junction
- (c) Depletion of negative charges near the junction
- (d) Concentration of positive and negative charges near the junction

#### 33. The pn-junction diode is used as:

- (a) Amplifier
- (b) Rectifier
- (c) Oscillator
- (d) All of these

#### 34. When a PN-junction diode is reverse biased:

- (a) Electrons and holes are attracted towards each other and move towards the depletion region.
- (b) Electrons and holes move away from the junction depletion
- (c) Height of the potential barrier decrease
- (d) No change in the current takes place

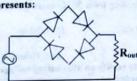

# 35. The electrical circuit used to get smooth dc output from a rectifier circuit is called:

- (a) Oscillator
- (b) filter
- (c) Amplifier
- (d) Logic gates

#### 36. In a PN-junction diode:

- (a) The current in the reverse biased condition is generally very small
- The current in the reverse biased condition is small but the forward biased current is independent of the biasing voltage
- the reverse biased current is strongly dependent on the applied biasing voltage
- (d) The forward biased current is very small in comparison to reverse biased current

#### 37. The following circuit represents:

(a) Half wave rectifier

Full wave rectifier

Quarter wave rectifier

Not a rectifier

## 38. In a full wave bridge rectifier, how many diodes conduct at a time?

- (b) 2
- (c) 3
- 39. If the time period of A.C source applied on the input of full wave rectifier is T1 and time period of the output ripple is To, then the relation between these two is:
  - (a)  $T_0 = 2T_1$
- (b)  $T_0 = \frac{T_1}{\sqrt{2}}$
- (c)  $T_0 = \sqrt{2} T_1$  (d)  $T_1 = 2T_0$

**ELECTRONICS** UNIT 10

Lavan Publish

40. The output across resistor in the circuit shown will be:

41. If the diode D₁ is taken off from the circuit, the output across resistor will become?

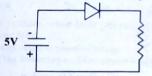

(a) Half wave rectifier

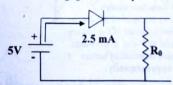

(b) Full wave rectifier

(c) Zero

- A.C
- 42. The potential drop across resistor in following circuit is:

- (a) (5+0.7) V
- (b) (5-0.7) V
- (c) 5V
- (d) Zero
- 43. If the diode resistance is negligible, the output resistance of following circuit Ro= ......

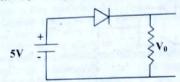

- (a) 1 KΩ
- (b) 3 KΩ
- (c) 2 KΩ
- (d) 5 KΩ

- 44. The rms value of the output of full wave rectifier is:

| Sr. 40. | 41. | 42. | 43. | 44. |  |  |
|---------|-----|-----|-----|-----|--|--|
| Ans: d. | d   | d   | c   | a   |  |  |

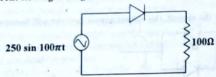

AMDCAT PREP BOOK

45. In the following circuit, the output will be about:

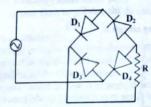

- (a) Pulsating D.C
- rectifier D.C
- (c) Pure D.C
- (d) Pure A.C

46. The rms current flowing through the following circuit will be:

47. In the following figure what happens for the positive half cycle of the input?

- (a) D₁ and D₄ conduct
- D4 and D2 conduct

- D₁ and D₂ conduct
- D4 and D3 conduct
- 48. In the forward bias arrangement of a PN-junction diode;
  - (a) The N-end is connected to the positive terminal of the battery
  - (b) The P-end is connected to the positive terminal of the battery
  - (c) The direction of current is form N-end to P-end in the diode
  - (d) The P-end is connected to the negative terminal of battery
- 49. The potential barrier for silicon diode is approximately:
  - (a) 0.3 V
- (c) 1.1 V
- (d) 1.4 V

- (b) 0.7 V
- 50. PN-junction diode works as a insulator if connected: (a) To A.C
  - (b) In forward bias

(c) In reverse bias

- (d) None of these

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                         |                 |                                             | STATE OF THE PERSON NAMED IN |

NMDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

PRACTICE TEST NO. 2

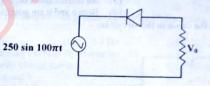

1. In the circuit shown, the output across resistor during  $(\frac{T}{r} - T)$  is:

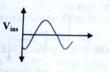

- (a) Positive pulse
- (b) Zero
- (c) Negative pulse
- 2. In half wave rectifier, if the time period of input A.C is 50 ms, then the frequency of ripple at output in hertz is:
  - (a) 50

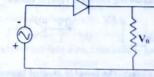

UNIT 10

- (b) 30
- (c) 40
- (d) 20
- 3. The time period of the ripple at the output of the following circuit is:

- (a) 100 ms
- (b) 20 ms
- (c) 50 ms
- (d) 10 ms
- 4. In a half wave rectifier, when diode gets reverse biased, the voltage across its terminals:
  - (a) Become zero
  - (c) Becomes equal to potential barrier
- (b) Becomes equal to source voltage
- (d) None of these
- 5. The output of the following rectifier circuit will be:

- 6. The electrical resistance of depletion layer is larger because:
  - (a) It has no charge carriers

- (b) It has a large number of charge carries
- (c) It increases the number of minority charge carriers
- (d) Increases the number of majority charge carries
- 7. In a junction diode, the holes are due to:
  - (a) Protons
- (b) Neutrons
- (c) Extra electrons

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | electrons |    |  |  |  |  |  |

Ans:

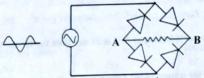

391

be:

8. The output across the resistor in the circuit shown for positive half of A.C source will be:

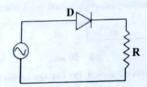

- (a) Positive pulse
- (b) Negative pulse
- Zero for both halves of A.C.
- (d) Pure D.C
- 9. The direction of current through the resistor in the circuit shown during negative half of A.C will

(a) From A to B

- No current flows during negative half
- Both a and b are possible
- (c) From B to A
- 10. During the positive half of A.C the diode in the circuit is:

- (a) Forward biased (b) Open
- (c) Reverse biased
- (d) None of these

11. Which of the following diodes is reverse biased?

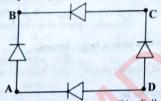

12. I n the diagram shown, the input is applied between A and C and output is across B and D. Then the output is:

(a) Half wave rectifier

(b) Full wave rectifier

(c) Zero

(d) Same as input

| Sr.  | 8. | 9. | 10. | 11. | 12. |

13. The output of the following circuit will be:

- (a) Pulsating full wave rectified D.C.
- (b) Sinusoidal A.C.
- (c) Pulsating half wave rectified D.C.
- (d) Zero
- 14. The approximate ratio of resistance in the forward and reverse bias of the PN-junction diode is: (a)  $10^2:1$ (b) 10⁻²:1 (c) 1:10⁻⁶ (d) 1:106
- 15. The resistance of a reverse biased PN-junction diode is about:
  - (a) 1 ohm

UNIT 10

- (b)  $10^2$  ohm
- (c) 10³ ohm

- 16. Function of rectifier is:
  - (a) To convert ac into de

(b) To convert de into ac

(c) Both a,b

- (d) To give constant D.C
- 17. If a full wave rectifier circuit is connected from 50 Hz mains, the fundamental frequency of the riple will be:
  - (a) 50 Hz
- (b) 70.7 Hz
- (c) 100 Hz
- (d) 25 Hz

(d) 106 ohm

- 18. In forward biasing current flows due to:
  - (a) Majority charge carriers
- (b) Minority charge carriers
- (d) lons
- 19. A diodes characteristics curve is a plot between:
  - (a) Voltage and time

(b) Voltage and current

(c) Current and time

(c) Both a and b

- (d) All of these
- 20. In full wave bridge rectifier, minimum number of diodes required are: (a) Only one (b) Two
- (c) Three 21. Slope of the reverse characteristics of a PN-junction represents its:
- (d) Four
- - (a) Conductance
- (b) Conductivity

- (d) Resistivity
- (c) Resistance 22. The ratio of potential barrier for Ge to Si at room temperature is:

- 23. The process in which alternating current is converted into direct current is called:
  - (a) Rectification
- (b) Amplification
- (c) Inversion
- (d) Complementation
- 24. In full wave rectification with a center tapped transformer, how many minimum diodes are required:
- (b) 3

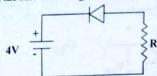

- 25. If the frequency of A.C in half wave rectifier is "f" and period is T then after rectification the product of rectified signal's frequency & period is:

- (d) 1
- 26. A semiconducting device is connected in a series circuit with a battery and a resistance. A current is found to pass through the circuit. If the polarity of the battery is reversed, the current drops to almost zero. The device may be:
  - (a) A p-n junction diode

- (b) An n-type semiconductor
- (c) A p-type semiconductor
- (d) An intrinsic semiconductor

27. In figure, the current through the resistor is practically:

(b) 1 A

(b) 100

(d) Zero (c) 2 A

28. A half-wave rectifier is being used to rectify an alternating voltage of frequency 50 Hz. The number of pulses of rectified current obtained in two seconds is

(a) 50

(c) 25

(d) 200

29. Which device is used for conversion of A.C into D.C?

(a) Transformer

(b) OP-Amp

(d) OR-Gate

(c) Semiconductor Diode

30. Conversion of alternating current into direct current is called:

(c) Rectification

(d) None of these

(b) Modulation 31. Output voltage of a rectifier is not smooth. It can be made smooth by using a circuit known as: (a) Amplification

(a) Wheat stone circuit

(b) Ripple circuit (d) Filter circuit

(c) Bridge circuit

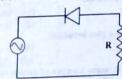

32. In a half wave rectifier circuit, the ratio of resistance of diode during conduction half of A.C to its resistance during blocking half is of the order of:

(a) 1:10⁶

(b) 1:10³

33. For the circuit shown:

Rectified output will be zero across resistor during

, if the input A.C waveform is as

(a)  $\left(0 \to \frac{T}{4} \text{ and } \frac{3T}{4} \to T\right)$ 

following:

(c)  $\left(0 \to \frac{T}{4} \text{ and } \frac{T}{2} \to \frac{3T}{4}\right)$ 

34. Most useful type of rectification is/are:

(a) Half wave rectification

(b) Full wave rectification

(d) Both A and B

(c) Quarter waver rectification 35. In a half wave rectifier, when diode gets forward biased, the voltage across its terminals:

(a) Becomes zero

(b) Becomes equal to source voltage

(c) Becomes equal to potential barrier

(d) None of these

36. Ripple factor of half wave rectifier is (a) 1.21

(b) 0.8

(c) 0.6

(d) -0.4

37. Maximum efficiency of half wave rectifier is

(a) 80.6%

(b) 40.60%

(c) 70%

(d) 50%

38. The output voltage of a rectifier is

(a) Smooth

(b) Pulsating

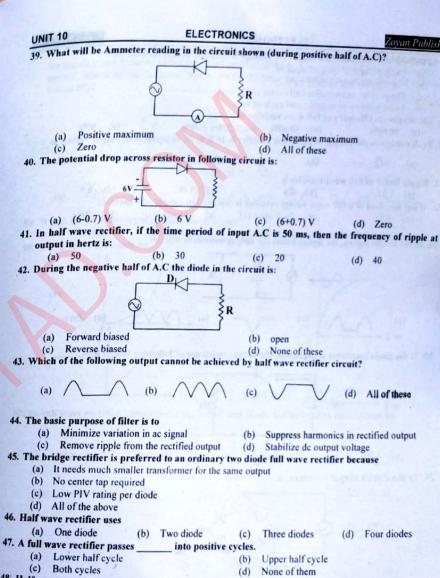

(c) Perfectly direct

(d) Alternating

36. 33. 32. 30. 31. d

MDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

48. Half wave rectifier passes only:

(a) Lower half cycle

(b) Both cycles

(c) Upper half cycle

(d) Either lower or upper

MDCAT PREP BOOK

# 49. In half wave rectification, the output DC voltage is obtained across the load for

- (a) The positive half cycle of input AC
- (b) The negative half cycle of input AC
- (c) The positive and negative half cycles of input AC
- (d) Either positive or negative half cycle of input
- 50. The maximum efficiency of full wave rectifier is
  - (b) 40.60% (a) 80.60%

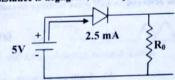

(c) 70%

- (d) 50%
- 51. Peak voltage in the output of half wave rectifier is 10 V so dc component of output voltage is
  - (a)  $10\sqrt{2}$
- 10
- $10/\pi$
- $10\pi$

- 52. Ripple factor of full wave rectifier is
  - (a) 1.21
- (c) 0.482
- (d) 0.9
- 53. If any one diod of a full wave bridge rectifier is removed its output will become:
  - (a) A.C
- (b) Half wave D.C
- (c) Smooth D.C
- (d) Zero
- 54. In the circuit shown, the figure below the output waveform will be:

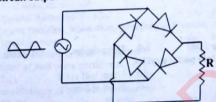

- 55. If the diode resistance is negligible, the output resistance of following circuit Ro=......

- (a) 1 KΩ
- (b) 3 KΩ
- (c) 2 K \O
- (d) 5 KΩ

56. In the circuit output waveform is

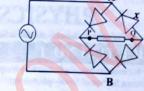

|      |     |     |     | 111 | A LA |     | AND DESCRIPTION OF | 200 |
|------|-----|-----|-----|-----|------|-----|--------------------|-----|

| Ans: | d   | a   | c   | c   | c    | a   | C                  | a   |

MDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

57. The circuit shows a bridge rectifier with a sinusoidal alternating voltage applied to it, the output terminals P and Q being joined by a load resister. If diode X were removed leaving a break in the circuit, which of the following traces would be seen on a cathode ray oscilloscope connected across PQ?

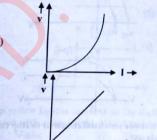

ELECTRONICS

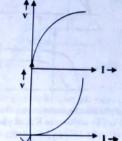

- 58. Which of the following is unidirectional device?
  - (a) Resistor
- (b) Capacitor
- (c) Inductor
- (d) Diode

59. I -V graph for a diode is:

UNIT 10

60. In half wave rectifier, shown in the fig. below, they diode will become as open circuit in:

- (a) +ve half cycle
- - (b) -ve half cycle
- (c) Both

(d)

| Sr.  | 57. | 58. | 59. | 60. |
|------|-----|-----|-----|-----|

# UNIT 11 >>

# **DAWN OF MODERN PHYSICS**

# PRACTICE TEST NO. 1

 A gamma ray photon has frequency 10²² Hz and an X-ray photon has frequency 10¹⁸ Hz. The ratio of the momentum of gamma ray photon to that of X-ray photon is:

(a)  $10^{-4}$ 

(b) 10⁺⁴

(c) 10⁶

2. Which of the following correctly describes the characteristics curves of photoelectric current "L" versus applied voltage for same intensities of light of different frequencies when incident on same metal:

(c)

3. In a phtoelectic experiment, the minimum negative anode potential required to stop the electrons is 5V. The maximum K.E of photoelectrons depends on:

(b) 4.8 x 10⁻¹⁹ J (a) 8 x 10⁻¹⁹ J

(d) 7.6 x 10⁻¹⁹ J (c) 6.4 x 10⁻¹⁹ J

4. The work functions of two different metals "N" and O are 3.2 eV and 1.6 eV respectively. If the threshold wavelength of "O" is 750 nm, then threshold wavelength of metals "N" is:

(a) 375 nm

(b) 1500 nm

(c) 650 nm

(d) 525 nm

5. A metal surface of work function 1.07 eV is radiated with light of wavelength 332 nm. The retarding potential required to stop the escape of photo - electrons is:

(a) 4.81 eV

(b) 2.66 eV

(c) 1.07 eV

(d) 3.74 eV

6. According to the quantum theory, which of the following is correct?

(a) Energy is emitted or absorbed as a continuous wave

Radiation energy from a source is continuous rather than consisting of large number of tiny (b)

particles

Energy is emitted or absorbed in discrete packets (c)

- (d) Intensity wavelength curves obtained from a black body represent line spectrum
- 7. If "E" is the energy of photon, "p" is its momentum, "f" is its frequency, "\lambda" is its wavelength and "c" is its speed, Then which of the following relation is correct?

(a) E=pc

8. The threshold wavelength for a metal show work function is 2 eV is:

(a) 620 nm

(b) 2480 nm

(c) 1240 nm

(d) 620 nm

By AZHAR IQBAL 0336-7098894

Photoelectrons are emitted by a metal when photons of wavelength 410 nm are incident. If the K.E of the emitted electrons is to be increased, then:

(a) Intensity of radiation should be decreased

Wavelength of radiation should be increased

Intensity of radiation should be decreased (c)

Wavelength of radiation should be decreased

10. The work function of metal is 7.7 eV and photons of energy 22.5 eV are incident on metal surface. then stopping potential will be:

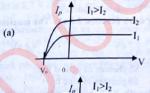

(a) 14.8 V

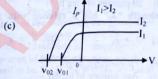

UNIT 11

(b) 15 eV

(c) 13.6 V (d) 14.8 eV

11. Which of the following correctly describes the characteristic curves of photoelectric current "I." versus applied voltage for two intensities "I1" and "I2" of a monochromatic light when incident on same metal:

12. When yellow light is incident on the surface of metal, it emits photo-electrons but there is no such emission with orange light. Which one of these cannot produce emission of photoelectrons?

(b) Blue

(c) Red

13. Let p and E denote the linear momentum and energy respectively of a photon. If the wavelength is increased.

(a) p decreases and E increases

(b) p increases and E decreases

(c) Both p and E increase

(d) Both p and E decreases

14. In a photoelectric emission experiment a metal surface in an evacuated tube was illuminated with monochromatic light. If the experiment were repeated with light of the same wavelength, but of twice the intensity, which of the following would be true?

(a) The photon energy is doubled

The maximum kinetic energy of the ejected electrons is doubled

(c) The work function of the metal becomes halved

(d) The photocurrent is doubled

15. Dual nature of radiation is shown by:

(a) Diffraction and interference

(b) Refraction and diffraction

(c) Photoelectric effect alone

(d) Photoelectric effect and diffraction

16. When the frequency of the incident light is equal to or greater than the threshold value then there will be:

Spontaneous emission of photoelectrons (c) Simulated emission of photoelectrons

(b) Thermionic emission of photoelectrons (d) Induced emission of photoelectron

17. Compton's shift in wavelength ( $\Delta\lambda$ ) is zero, when scattered angle of photon is:

(a) 90° (b) 180° (c) (d) 45° 12. 13. 14. 15. 16. 17. Ans: d

| 19. A process in when in (a) Photoel (c) Compto (c) Compto (d) (d) Photoel (d) Stophot (d)      | (a) Transformer (b) Semiconductor drotter  19. A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase 21. The minimum frequency of incident light required to emit photoelectrons from the metal surfatis called:  (a) Critical frequency (c) Work function (d) Threshold frequency (e) Work function (d) Threshold frequency (e) Work function (d) Threshold frequency (e) Work function (f) The stopping potential will increase (h) Intermediate frequency (h                                                                                                                                                                                                                      | 25. A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase (e) The minimum frequency of incident light required to emit photoelectrons from the metal surfairs called: (a) Critical frequency (b) Intermediate frequency (c) Work function  21. A photon of energy 3.4 eV is incident on a metal having work function 2.3 eV. The maximum K of photo-electrons is equal to: (a) 1.4 eV (b) 1.1 eV (c) 1.7 eV (d) 4.4 eV  23. Which of the following has greatest energy content? (a) 50 photons of green light (b) 50 photons of yellow light (c) 50 photons of orange light (d) 50 photons of blue light (e) 50 photons of orange light (f) 50 photons of blue light (h) 50 photons of blue light                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |        |                     |        | 9 141   | (t      | ) \ \lambda | - λ _i |                   |         | (c)                 | $\lambda_s >$                           | $\lambda_i$        |         | (0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 1)    | $\Lambda_{\rm S} \leq \Lambda$ | i      |

A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase 21. The minimum frequency of incident light required to emit photoelectrons from the metal surfairs called:  (a) Critical frequency (c) Work function  22. A photon of energy 3.4 eV is incident on a metal having work function 2.3 eV. The maximum K of photo-electrons is equal to: (a) 1.4 eV (b) 1.1 eV (c) 1.7 eV (d) 4.4 eV  23. Which of the following has greatest energy content? (a) 50 photons of green light (b) 50 photons of yellow light                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |        |                     |        |         |         |             |                  |                   |         | (a)                 | 50 p                                    | 42 n               | hae     | a rel                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | atio  | n with                         | inci   |

A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase 21. The minimum frequency of incident light required to emit photoelectrons from the metal surfairs called:  (a) Critical frequency (b) Intermediate frequency (c) Work function (d) Threshold frequency (d) Threshold frequency (e) Work function (22. A photon of energy 3.4 eV is incident on a metal having work function 2.3 eV. The maximum K of photo-electrons is equal to:  (a) 1.4 eV (b) 1.1 eV (c) 1.7 eV (d) 4.4 eV                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          | (a)    | 50 ph               | otons  | of gr   | een li  | ight        |                  |                   |         | (0)                 | 50 m                                    | hoton              | e of h  | due lie                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ht    |                                |        |

A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase 21. The minimum frequency of incident light required to emit photoelectrons from the metal surfa is called:  (a) Critical frequency (b) Intermediate frequency (c) Work function  22. A photon of energy 3.4 eV is incident on a metal having work function 2.3 eV. The maximum K                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | of       | phot   | o-elect             | rons   | is equ  | ial to  | :           |                  |                   |         |                     |                                         |                    |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |                                |        |

A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease (c) The photoelectric current will increase (d) The stopping potential will increase  21. The minimum frequency of incident light required to emit photoelectrons from the metal surfair is called:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |        |                     |        |         |         |             |                  |                   |         | (4)                 | Thre                                    | shole              | frequ   | uency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |                                |        |

The minimum frequency of incident light required to emit photoelectrons from the metal surfa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | is c     |        |                     | 10     |         |         |             |                  |                   |         | (b)                 | Inte                                    | rmedi              | ate fr  | equeno                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | cy    |                                |        |
| 19. A process in when i positron when i (a) Photoel (c) Compto 20. If the waveleng 4000 A, then:  (a) The photoel (a) The photoel (b) and (c) the control (c)       | (a) Transformer (b) Semiconductor drote  19. A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |        |                     | ireq   | uene    | y 01 1  | nerue       | ng               |                   |         |                     |                                         |                    |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |                                |        |
| 19. A process in when i positron when i (a) Photoel (c) Compto 20. If the waveleng 4000 A, then:  (a) The photoel (a) The photoel (b) and (c) the control (c)       | (a) Transformer (b) Semiconductor drote  19. A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:  (a) The photoelectric current may stop (b) The stopping potential will decrease                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          | (c)    | The p               | notoe  | necui   | v of i  | ncide       | nt lie           | ht rec            | uire    | d to e              | mit p                                   | hotoe              | lectro  | ons fro                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | om t  | he met                         | al sur |

If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A 4000 A, then:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |        |                     |        |         |         |             |                  |                   |         | (4)                 | The                                     | stonn              | ine p   | otentia                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | l wi  | Il incre                       | ase    |
| 19. A process in who positron when i  (a) Photoel  (c) Compto com      | (a) Transformer (b) Semiconductor drote (c)  19. A process in which a high energy gamma ray photon disappears by producing an electron and positron when it passes close to heavy nucleus is called:  (a) Photoelectric effect (b) Pair annihilation (c) Compton's effect (d) Pair production  20. If the wavelength of incident radiation in a photoelectric experiment is decreased from 6000 A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 400      | 000 A  | , then:             | hates  | lactri  | e cur   | rent m      | av st            | op                |         | (b)                 | The                                     | stopp              | ing p   | otentia                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | l wi  | II decre                       | ease   |

- (c)  $2x10^{-19}$  J (d)  $2.7x10^{-19}$  J
- 48. The photoelectric threshold for a metal is 300 nm. If the metal is illuminated with radiation of 400 nm, then the maximum K.E of emitted electrons is:
  - (a) 1.5 eV
- (b) 3.3 eV
- (c) 4.2 eV
- There is no photo emission
- 49. A metal "N" is illuminated by ultraviolet and visible radiation successively and stopping potential is measured. This stopping potential is:
  - (a) More with visible light

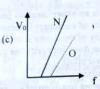

(b) More with ultraviolet light

(c) Equal in both cases

- (d) May A or B
- 50. In a photoelectric experiment, electrons are ejected from metals "N" and "O" by light of frequency f. The stopping potential "V_o" is measured for various frequencies. If "O" has greater work function than "N", which graph illustrates the expected result?

# PRACTICE TEST NO. 2

- 1. The proton and antiproton collision will result:
  - (a) Scattering
- (b) Repulsion
- (c) Attraction
- (d) Annihilation

- 2. Which particle has dual nature?
  - (a) Photon
- (b) Alpha
- (c) Electron
- (d) All of these

- 3. Which group consists of only electromagnetic waves: (a) Microwaves, radio waves, infrared
- (b) Microwaves, radio waves, sound (d) None of these
- (c) Microwaves, water waves, infrared 4. Einstein was awarded Nobel Prize for his work on:

  - (a) Photoelectric effect

- Nuclear fission All are correct
- (c) Theory of relativity 5. Existence of photon was confirmed by:
- (c) Einstein
- (d) Max planck

- (b) De-broglie (a) Compton

- 6. The speed of photons in vacuum is than in liquid water:
  - (a) Higher
- (b) Smaller
- (c) Equal
- (d) None of these
- 7. What is the energy of a photon in a beam of infrared radiation of wavelength 1240 nm?  $3.6 \times 10^6$  $1.6 \times 10^{-19}$ (d) (b)  $6.25 \times 10^{18}$ (a) 1
- 8. The momentum of the moving photon is:
  - (a) Zero
- (b) \(\lambda/h\)
- (c) hl
- (d)  $h/\lambda$

- 9. Which light photon has the least momentum
- (d) Blue
- (c) Yellow (b) Green (a) Red 7. 5. 6. Sr. a d a Ans:

NMDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

10. The frequency of the incident photon after Compton effect will

- (a) Remain constant (b) Increases
- (c) Decreases
- (d) None of these
- 11. In Compton's scattering the change in the wavelength is given by:
  - (a)  $\Delta \lambda = \frac{h}{m_o c^2} (1 + \cos \theta)$

(c)  $\Delta \lambda = \frac{hc}{m} (1 - \cos \theta)$ 

12. The change in the wavelength in Compton's effect can be explained on the basis of:

- (a) Classical theory
- (c) Energy band theory

- (b) Quantum theory
- (d) Wave theory 13. According to the quantum theory, which of the following is correct?
  - (a) Energy is emitted or absorbed as a continuous wave
  - (b) Intensity-wavelength curves curves obtained from a black body represent line spectrum
  - (c) Energy is emitted or absorbed in discrete packets
  - (d) Radiation energy from a source is continuous rather than consisting of large number of tiny
- 14. If a surface has work function of 3.00 eV, the longest wavelength of light which will cause the emission of electrons is:
  - (a) 4.876x10⁻⁷ m
- (b)  $4.125 \times 10^{-7}$  m (c)  $5.998 \times 10^{-7}$  m
- (d) 6.847 x 10⁻⁷ m
- 15. The work function of tungsten 4.5 eV. The threshold frequency is:
  - (a)  $1.09 \times 10^{15} \text{ Hz}$  (b)  $1.09 \times 10^{-15} \text{ Hz}$  (c)  $0.91 \times 10^{15} \text{ Hz}$  (d)  $1 \times 10^{16} \text{ Hz}$

- 16. Photoelectric effect shows;
  - (a) Wave-like behavior of light
  - (b) Particle-like behavior of light
  - (c) Both wave-like and particle-like behavior of light
  - (d) None of these
- 17. Photoelectric effect is the phenomenon in which:
  - (a) Photons come out of metal when it is hit by a beam of electrons
  - (b) Photons come out of nucleus of an atom under the action of an electric field
  - (c) Electrons come out of a metal with constant velocity
  - (d) Electrons come out of a metal with different velocities not greater than a certain value
- 18. According to particle model of light, a photon travels with speed equal to:
  - (a) 3 x 106 m s⁻¹ (b) 3 x 107 m s⁻¹
- (c) 3 x 10 m s
- (d) 3 x 108 m s⁻¹

- 19. The time of photoelectron emission is usually:
  - (a) Less than nano-second
- (b) Equal to one micro-second
- (c) Greater than nano-second
- (d) Equal to one mili-second
- 20. Compton shift in the wavelength of photon when it scattered at angle 60° is:
  - (a) h moc
- (b) 3h (c) 2mac
- (d)
- $2m_{o}c$ 21. The particle nature of electromagnetic radiation is suggested by experiments on:
  - (a) The interference experiment
  - (b) Compton's effect
  - (c) The electron diffraction experiment
- (d) The scattering of X-rays by crystalline materials 22. Compton's effect is mainly associated with:
- (a) Gamma rays
  - (b) X-rays
- (c) Beta rays
- (d) Positive rays
- 23. The photon is a radio wave of wavelength 3×108 cm have an energy: (a)  $6.63 \times 10^{-32}$  J
  - (b) 6.63×10⁻²⁸ J
- (c) 6.63×10⁻³⁶
- (d)  $6.63 \times 10^{-30} \text{ J}$

MDCAT PREP BOOK

24. A, gamma ray photon has frequency  $5\times10^{22}$  Hz and an X-ray photon has frequency  $2\times10^{22}$ 1018 Hz. The ratio of the momentum of X-ray photon to that of gamma-ray photon is:

(a)  $4 \times 10^{-5}$ 

(c)  $2.5 \times 10^4$ 

(d)  $4 \times 10^5$ 

25. Stopping potential depends:

- (a) Only upon the energy of incident photon
- (b) Only on the work function of the metal
- (c) On the difference in energy of incident photon and work function of metal
- (d) On the sum of energy of incident photon and work function of metal

26. The energy of a photon is  $9 \times 10^{-19}$  J. Its momentum is: (b)  $10^{-11} kg ms^{-1}$ 

(a)  $10^{-27} \text{ kg ms}^{-1}$ 

(c)  $9.10 \times 10^{-11} \text{ kg ms}^{-1}$  (d)  $3 \times 10^{-27} \text{ kg ms}^{-1}$ 27. Which of the following is correct descending order of wavelength of given electromagnetic radiation?

- (a) Microwaves, short radio waves, infrared
- (b) x-rays, visible, microwaves
- (c) Long radio waves, infrared, ultraviolet
- (d) Ultraviolet, gamma rays, X-rays

28. Visible region of electromagnetic radiation spectrum ranges: https://example.com/

- (a) From 350 nm to 800 nm
- (b) From 400 nm to 600 nm (d) From 500 nm to 700 nm
- (c) From 400 nm to 750 nm 29. Which photon, red, green, indigo or orange carries the least momentum? (c) Orange (d) Green
- (b) Indigo (a) Red
- 30. Which of the following is correct about photoelectric effect? (a) Electrons are emitted if frequency of incident photons is below a critical value

  - (b) Electrons are emitted if wavelength is more than a critical value
  - (c) Speed of photoelectrons is inversely proportional to work function
  - (d) K.E of photoelectrons is directly proportional to intensity incident photon beam
- 31. Photoelectric effect is based on law of conservation of:
  - (a) Charge
- Angular momentum
- Momentum
- (d) Energy

32. Photoelectrons are emitted by a metal surface only when the light incident on it:

- (a) Has wavelength greater than a certain minimum wavelength
- (b) Has frequency less than or equal to certain maximum frequency
- (c) Has wavelength less than or equal to certain maximum wavelength
- (d) May A or C

33. The maximum speed of photoelectrons depends on:

- (a) Threshold frequency of cathode
- (b) Frequency of incident light

(d) All of these

34. In a photoelectric experiment, the wavelength of incident light is increased. Which of the following is the effect of this change on the K.E of emitted electrons?

(a) Average K.E increases

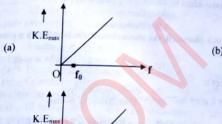

- (b) Minimum K.E decreases
- (c) Maximum K.E increases
- (d) Average K.E decreases

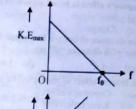

- 35. Which phenomena cannot be explained wave theory of light? (b) Interference
  - (d) Photoeletric effect (c) Polarization
- 36. A photon of energy 3.4 eV is incident on a metal having work function 2 eV. The maximum K.E. of photo- electrons is equal to: (d) 6.8 eV
  - (a) 14eV
- (b) 1.7 eV

DAWN OF MODERN PHYSICS

38. The momentum of the photon of wavelength 3000 Ao will be:

- (a)  $1.3 \times 10^{-27} \, kg \, ms^{-1}$
- (b)  $2.2 \times 10^{-27} \text{ kg ms}^{-1}$
- (c)  $1.3 \times 10^{-28} \, kg \, ms^{-1}$
- (d)  $2.2 \times 10^{-28} \, kg \, ms^{-1}$
- 39. The correct relation out of following:

- (d) None of these

40. Which photon, red, green, indigo or orange carries the most energy?

(a) Indigo

(c)

UNIT 11

- (b) Orange
- (c) Green

41. Light of frequency 1.5 times the threshold frequency is incident on a photo sensitive surface. If the frequency is halved, the photoelectric current is:

- (a) Doubled
- (b) Halved
- (c) Same
- (d) Reduce to zero

42. A metal surface ejects electrons when incident by blue light but no electron when incident by green light. The electrons will be ejected when the surface is incident by:

- (a) Violet light
- (b) Red light
- (c) Yellow light
- (d) Orange light
- 43. Two photons have wavelength 650 nm and 1300 nm. The ratio of their respective frequencies is: (a) 4:1 (b) 1:1 (c) 1:2 (d) 2:1
- 44. The momentum of a photon of wavelength 100 Å is:
- (a)  $6.63 \times 10^{-26} \text{ Ns}$  (b)  $6.63 \times 10^{-22} \text{ Ns}$  (c)  $6.63 \times 10^{-21} \text{ Ns}$  (d)  $6.63 \times 10^{-28} \text{ Ns}$

45. Photons of energy 6.2 eV are incident on a metal whose work function is 4.2 eV. The K.E of the fastest electrons emitted in joules is:

- (a) 6.8x10⁻¹⁹
- (b) 4.8x10⁻¹⁹
  - (c) 1.6x10⁻¹⁹
- (d) 3.2 x 10⁻¹⁹

46. The frequency of photon of energy 4 eV is of the order of:

- (a) 10¹⁵ Hz
- (b) 10¹¹ Hz
- (c) 10²¹ Hz (d) 10¹⁸ Hz
- 47. The work function of a metal is 3.3 eV. The threshold frequency of that metal will be:
- (a) 8x10¹⁴Hz. (b) 2x10²⁰ Hz 48. The work function for potassium and sodium respectively:
- (c)  $4x10^{14}$  Hz
- (d) 5x10²⁰ Hz

(a) 2.3 eV, 2.7 eV (b) 5.1 eV, 2.3 eV (c) 4.7 eV, 4.3 eV

- (d) 5 eV, 4.8 eV

49. According to particle model of light, a photon is electrically: (a) Neutral (b) Positively charged

- 50. Invisible region of electromagnetic radiation spectrum lies below:
- (d) Negatively charged

- 33. Lights of two different frequencies whose photons have energies 1 eV and 2.5 eV respectively, successively illuminate a metal of work function 0.5 eV. The ratio of maximum speeds of the emitted electrons will be:

- 34. What energy (in joules) would a photon of light with a wave length 3 x  $10^{-4}$  cm have:
- (b) 3.3 x 10⁻²¹
- (c)  $6.6 \times 10^{-20}$
- (d) 6.6 x 10⁻⁴⁸
- 35. Which of the following is dependent on the frequency of incident radiation in a photoelectric experiment?
  - (a) Amount of photoelectric current
  - Stopping potential to reduce the photoelectric current to zero
  - Work function of the metal used in the experiment
  - (d) Threshold wavelength
- 36. In Compton's effect if f is frequency of incident photon and f' is frequency of scattered photon, then which of the following is true?
  - (a) f = f
- (b)  $f \ge f$
- (c)  $f' \leq f$  (d) f' < f
- 37. A photocell is based on the principle of:
  - (a) Photoelectric effect (c) Compton' effect

- (b) Pair production
- (d) Annihilation of matter
- 38. The work function of tungsten is 4.5 eV. The threshold frequency is:
  - (b) 0.91x10¹⁵ Hz (a)  $1.09 \times 10^{15} \text{ Hz}$
- (c) 1.09x10⁻¹⁵ Hz
- (d) 1x10¹⁶ Hz
- 39. What is the energy of photon in a beam of infrared radiation of wavelength 1240 nm?
- (c) 4 eV
  - (b) 3 eV
- 40. A beam of red light, a beam of yellow light, a beam of green light and a beam of blue light have exactly the same energy. Which beam contains the greatest number of photons and which beam contains the smallest number of photons? (d) Yellow, red (c) Red, blue
- (b) Blue, yellow

- 41. If 'm' is the mass, 'c' is the velocity of light and  $x = mc^2$ , then dimensions of 'x' will be: (d) [MLT⁻²] (c)  $[ML^2T^2]$ (b) [MLT⁻¹]
- (a) [LT⁻¹]

- 42. Which of the following has greatest energy content?
  - (a) 10 photons of yellow light
- 10 photons of blue light
- (d) 10 photons of red light (c) 10 photons of violet light
- 43. Two light beams of same intensities and same energies are incident on two different metals with work functions " $\Phi_2 = 2\Phi_1$ ". Which of the following correctly describes the characteristic curves of photoelectric currents versus applied voltage for given two metals:

(b) 4 eV

- 45. Which of the following graph shows the variation of energy "E" of a photon of light with its frequency "f"?

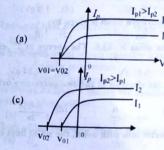

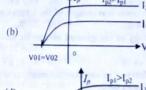

UNIT 11

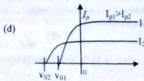

46. Two light beams of intensities "I1" and "I2" such that I1>I2 but both beam have same energies are following correctly describes the characteristic curves of photoelectric current (Ip1, Ip2) versus, applied voltage for the given two metals:

- 47. Plank's constant has same units as that of:
  - (a) Pressure
- (b) Power
- (c) Momentum
- Angular momentum

- 48. Speed of zero rest mass particle in free space is:
  - (a) Zero
- (b) Infinite
- $3 \times 10^8 m/s$
- (d) 332 m/s
- 49. The ratio of energy photon to momentum of photon is equal to: (a) Speed
- 50. Kgm2s-1 is unit of
- (b) Wavelength
  - - (c) Frequency
- (d) None of these

By AZHAR IQBAL 0336-7098894 NMDCAT PREP BOOK

| 5. The | sh   | ortest | wavelength    | of spec | tral line | in Balmer of Hydrogen atom is: |
|--------|------|--------|---------------|---------|-----------|--------------------------------|
| (      | a)   | $R_H$  |               | (b)     | $1/R_H$   | (c) 0                          |
| If r.  | is I | the ra | dius of first | quanti  | zed orbit | of hydrogen atom at            |

itom, then radius of 4th quantized orbit is: 17. Which series of spectral lines in hydrogen spectrum does not lie in the infra-red region?

ATOMIC SPECTRA

(b) Paschen series (c) Balmer series (a) Pfund series (d) Brackett series 18. To find longest wavelength in Paschen series of hydrogen spectrum, the value of n is taken equal

to:

19. Which of these series of hydrogen spectrum lies in the ultra-violet region?

(a) Paschen series (b) Pfund series (c) Brackett series (d) Lyman series

20. The ratio of energies of first two excited states of hydrogen atom is:

21. The velocity of electron in the second orbit of hydrogen atom is v. The velocity of electron in fifth orbit will be:

(a) V

22. Highest frequency of Balmer series of hydrogen atom in terms of Rydberg constant Ru and velocity of light c is:

(a) R_HC (c) 4R_Hc

23. When hydrogen atom is in first excited exerted state; It's radius is how many times of its ground state radius? (a) Half (b) Twice

(c) Four times (d) Same as that of ground state 24. The ratio of shortest to longest wavelength of Lyman series is approximately:

25. Radius of first Bohr orbit is r. What is the radius of 2nd Bohr orbit?

(a) 8r (b) 2r (c) 4r (d)  $2\sqrt{2}r$ 

26. In hydrogen atom which quantity is integral multiple of  $h/2\pi$ :

(a) Angular momentum (b) Angular velocity (c) Angular acceleration (d) Momentum

27. According to Bohr's theory the moment of momentum of an electron revolving in second orbit of hydrogen atom will be:

(a) 2 = h(b) πh (d) 2h/π

28. Which of the following line of Balmer series has longest wavelength?

(a)  $H_{\alpha}$ (b) H_B (c) H,

same value 29. Hydrogen atom can give spectral lines in the series named as Lyman, Pfund, Bracket, Balmer

and Paschen. Which of the following is correctt?

(a) Paschen series is in visible region (b) Pfund series is in ultraviolet region (c) Brackett series is in infrared region

(d) Balmer series is in X-ray region 30. The shortest wavelength of radiation in Paschen series is:

(a) R_H/9

(b) R_H (c) 9/R_H (d) 9 + R_H

MDCAT PREP BOOK

By AZHAR IQBAL 0336-7098894

| UNIT 12 | ATOMIC SPECTRA |
|---------|----------------|
|---------|----------------|

47. Hydrogen atom in the ground state are excited by monochromatic radiation of photos 12.1 eV. The spectral lines emitted by hydrogen atom according to Bohr's theory will be: (a) 1 (c) 3

(a) 4 48. The energy required to knock out the electron in the third orbit of a hydrogen atom is equal to:

(a) 13.6 eV (d)  $\frac{3}{16.6}$ eV

49. The size of an atom is:

(a) 10⁻⁸ m

(d) 10⁻¹⁴ m

50. In the n orbit, the energy of an electron  $E_n = -\frac{13.6}{n^2}$  eV for hydrogen atom. The energy required to take the electron form the first orbit to second orbit will be:

(a) 10.2 eV

(b) 12.1 eV

(c) 3.4 eV

(d) 13.6 ev

| Sr   | 47. | 48. | 49. | 50. |

| Ans: | c   | b   | c   | a   |

### PRACTICE TEST NO. 2

| 1. | In the Bohr's hy | drogen | atomic | model, | the | radius | of th | ne stationary | orbit is | directly | proportiona |
|----|------------------|--------|--------|--------|-----|--------|-------|---------------|----------|----------|-------------|
|    | to:              |        |        |        |     |        |       |               |          |          |             |

(b) n⁻²

(d) n²

2. The lyman series of hydrogen spectrum lies in the region of:

(a) Infrared (b) Visible

(c) Ultraviolet (d) Of X-rays

3. Which one of the series of hydrogen spectrum is in the visible region:

(a) Lyman series (b) Balmer series

(c) Bracket series (d) Paschen series

4. The energy required to remove an electron in a hydrogen atom from n=10 state is:

(a) 13.6 ev

(b) 0.136 eV

(c) 1.36 eV

5. The ratio of the energies of the hydrogen atom in its first to second orbit of hydrogen atom is:

(b)  $\frac{1}{4}$  (c)  $\frac{9}{4}$ 

6. In any Bohr Orbit of the hydrogen atom, the ratio of Kinetic energy to potential energy of the electron is:

(a) 2

7. When a hydrogen atom is raised from the ground state to excited state:

(a) P.E increase and K.E decrease

(b) P.E decrease and K.E increase

(c) P.E increase and K.E increase

(d) P.E decrease and K.E decrease

8. The ratio of kinetic energy to the total energy of electron in Bohr orbit is:

(a) -1:1

(b) 1:2

(c) -2:1

9. The ratio of the long wavelength limits of Lyman and Balmer series of hydrogen spectrum is:

(b) 5:27

(c) 4:1

(d) 1:4

10. Which of the transitions in hydrogen atom emits a photon of lowest frequency? (b) n=4 to n=3

(a) n=2 to n=1

(c) n=3 to n=1(d) n=4 to n=211. According to Bohrs theory the moment of momentum of an electron revolving in 3rd orbit of hydrogen atom will be:

(a)  $2\pi h$ 

| Sr.  | 1 | 2, | 3, | 4. | 5. | 6. | 7. | 8. | 9. | 10. | 11. |

ATOMIC SPECTRA 25. The de-Broglie wavelength of an electron in the first Bohr orbit is: (a) Equal to one fourth the circumference of the first orbit (b) Equal to half the circumference of the first orbit (c) Equal to twice the circumference of the first orbit (d) Equal to the circumference of the first orbit 26. Molybdenum is used as target element for production of x-rays because it is: (a) A heavy element and can easily absorb high velocity electrons (b) A heavy element with a high melting point (c) An element having high thermal conductivity (d) Heavy and can easily deflect electrons 27. The electron is in 2nd excited state in hydrogen atom. Number of spectral lines emitted will be: (a) 2 (b) 4 28. The total energy of electron in the first excited state of hydrogen atom is -3.4 eV, The potential energy of electron in this state is: (a) -3.4 eV (c) -6.8 eV (d) 6.8 eV 29. Lyman series of hydrogen atom lies in: (a) Visible region (b) Infrared (c) U.V region (d) None of these 30. When an electron makes a transition from 4th energy level to 2nd energy level in hydrogen atom then the wavelength of emitted radiation would be: 31. Hellium was first identified in the using spectroscopy: (a) Earth (b) Jupiter (c) Sun (d) Stars 32. If L is angular momentum of electron in the 2nd orbit of hydrogen atom then angular momentum in the fourth orbit will be: (a) 2 L (b) 3 L 33. Atomic spectrum of hydrogen is: (a) Continuous spectrum (b) Band spectrum (c) Line spectrum (d) None of these 34. Electron revolving around the nucleus behaves as a: (a) Transverse wave (b) -wave (c) Longitudinal wave (d) Stationary wave 35. K.E of electron in the nth orbit of hydrogen atom is: (a)  $Ke/2r_n$ (b) Ke/r_n (c)  $Ke^2/r_n$ 36. The longest wavelength of spectral line for Balmer series is: (a) 36R_H/5 (b) 36 R_H (c) 36/5 R_H (d) None of these 37. The red line of the Balmer series corresponds to transition between energy levels having quantum numbers: (a) 4 and 2 (b) 3 and 2 (d) ∝ and 2 (c) 5 and 2 38. The value of Rydberg's constant "RH" is: (a)  $1.0974 \times 10^{-7} \text{ m}^{-1}$  (b)  $1.0974 \times 10^{7} \text{ m}^{-1}$ (c)  $1.0974 \times 10^{-7}$  m 39. The energies required in electron volt to remove an electron from three lowest excited states of hydrogen atom are: (a) 13.6, 3.4, 1.5 (b) 13.6, 10.2, 3.4 (c) 13.6, 6.8, 3.7 40. As the quantum number increases, the energy difference between consecutive energy levels of an atom: (a) Increases (b) Decreases (c) Remains same (d) Becomes infinite

NMDCAT PREP BOOK

UNIT 12

# 41. According to Bohr's Model of Hydrogen atom:

- (a) The linear velocity of electrons is quantized
- (b) The total-linear momentum of electrons is quantized
- (c) The angular momentum of electrons is quantized
- (d) All of these

## 42. The energy of an electron:

- (a) Is greater in outer orbit than in inner orbits
- (b) Is always the same whichever the orbit may be
- (c) Decreases as the quantum number increase
- (d) Is greater in inner orbits than in outer orbits

### 43. Which of the following is true?

- (a) Lyman series is a continuous spectrum
- (b) Paschen series is a line spectrum in the infrared
- (c) Both 'a' and 'b'
- None of these (d)
- 44. A hydrogen atom (ionization potential 13.6 eV) makes a transition from third excited state to first excited state. The energy of photon emitted in the process is:
  - (a) 1.89 eV
- (b) 2.55 eV
- (c) 12.09 eV
- (d) 12.75 eV

### 45. To explain his theory, Bohr used:

- (a) Conservation of linear momentum
- (b) Conservation of angular momentum
- (c) Conservation of quantum frequency
- (d) Conservation of energy
- 46. Hydrogen atoms are excited from ground state to the principal quantum number 5. Then the number of spectral lines observed will be:
- (b) 6

- 47. Minimum excitation potential of Bohr's first orbit in hydrogen atom is:
  - (a) 13.6 eV
- (b) 3.4 V
- (c) 10.2 V
- (d) 3.6 v
- 48. The energy required to excite an electron from the ground state of hydrogen atom to the first (a)  $1.602 \times 10^{-14} \text{ J}$  (b)  $1.619 \times 10^{-16} \text{ J}$  (c)  $1.632 \times 10^{-18} \text{ J}$  (d)  $1.656 \times 10^{-20} \text{ J}$ excited state, is:

- 49. The ratio of longest to shortest wavelength in Brackett series of hydrogen spectra is:
  - (a)
- (c)
- 50. The energy of hydrogen atom in its ground state is -13.6 eV. The energy of the level corresponding to the quantum number n is equal 5 is:
  - (a) -5.40 eV
- (b) -2.72 eV
- (c) -0.85 eV
- (d) -0.54 eV
- 51. Radius of the first orbit of the electron in a hydrogen atom in 0.53 Å. So, the radius of the third orbit will be:
  - (a) 2.12Å
- (b) 4.77Å
- (c) 1.06Å
- (d) 1.59Å
- 52. Energy of an electron in an excited hydrogen atom is -3.4 eV. Its angular momentum will be: (a)  $1.11 \times 10^{34} \text{ J sec}$  (b)  $1.51 \times 10^{-31} \text{ J sec}$  (c)  $2.11 \times 10^{-34} \text{ J sec}$  (d)  $3.72 \times 10^{-34} \text{ J sec}$
- 53. The wavelength of light emitted from second orbit to first orbit in a hydrogen atom is:
- (a) 1.215x10⁻⁷ m
- (b) 1.215x10⁻⁵ m
- (c) 1.215x10⁻⁴ m
- (d) 1.215x10⁻³ m

By AZHAR IQBAL 0336-7098894

ATOMIC SPECTRA

(c) 12.09 eV

(d) 1.51 eV

- 56. Energy E of a hydrogen atom with principal quantum number n is given by  $E = \frac{-13.6}{r^2}$  eV. The energy of a photon ejected when the electron jumps from n = 3 state to n = 2 state of hydrogen is approximately:
  - (a) 1.5 eV
- (b) 0.85 eV (c) 3.4 eV
- (d) 19eV

57. The Bohr model of atoms:

(a) 13.6 eV

(a) Assumes that the angular momentum of electrons is quantized

54. Energy of the electron in n orbit of hydrogen atom is given by En

energy added to transfer electrons from first orbit to third orbit is:

(b) 3.4 eV

- (b) Uses Einstein's photo-electric equation
- (c) Predicts continuous emission spectra for atoms

55. In nth shell of hydrogen atom velocity of electron is

- (d) Predicts the same emission spectra for all types of atoms
- 58. The kinetic energy of an electron revolving around a nucleus will be:
  - (a) Four times of P.E

(b) Double of P.F.

(c) Equal to P.E

- (d) Half of it P.E.
- 59. The spectrum of perfect black body is:
  - (a) Line

UNIT 12

(b) Band

(c) Continuous

- (d) All of these
- 60. Which source is associated with a line emission spectra:
  - (a) Electric fibre

(a) Continuous

- (b) Red traffic light
- (c) Neon street sign
- (d) Sun (c) Release
- 61. Sun spectra aiso has dark lines in pattern which corresponds to (b) Emission
- (a) Absorption 62. Atomic spectra is a ...... spectra:
  - (b) Discrete
- (c) Both a and b
- (d) None of these

(d) Free particle

- 63. When electron series terminates on 4th orbit ..... series is obtained.
  - (a) Balmer
- (b) Pfund
- (c) Paschen
- (d) Bracket
- 64. The atom is excited to an energy level E, from its ground state energy level E, the wavelength of the radiations emitted is:
- (c)  $\frac{(E_1-E_0)}{hc}$
- 65. If electrons of charge 'e' moving with velocity 'v' are accelerated through a potential difference 'V' and strike a metal target, then velocity of electrons is:

65. 63. 64.

| Radioactivity is the phenomenon associated with:                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

(a) Production of radio waves

(b) Reception of radio waves (c) Transmission of radio waves (d) Decay of atomic nucleus

15. According to laws of radioactive disintegration, the rate of decay is:

(a) Same for different elements

(b) Smaller for elements with smaller nuclear mass

(c) Different for different elements

(d) Greater for elements with smaller nuclear mass
